ClassicPro GQ – innovative flexibility for perfect milking results and teat condition

ClassicPro GQ is the name of the unique new silicone liner from GEA for the Classic 300 milking cluster. Benefit from the well thought-out, new design – because the round liner is square inside:

What does this mean for you?

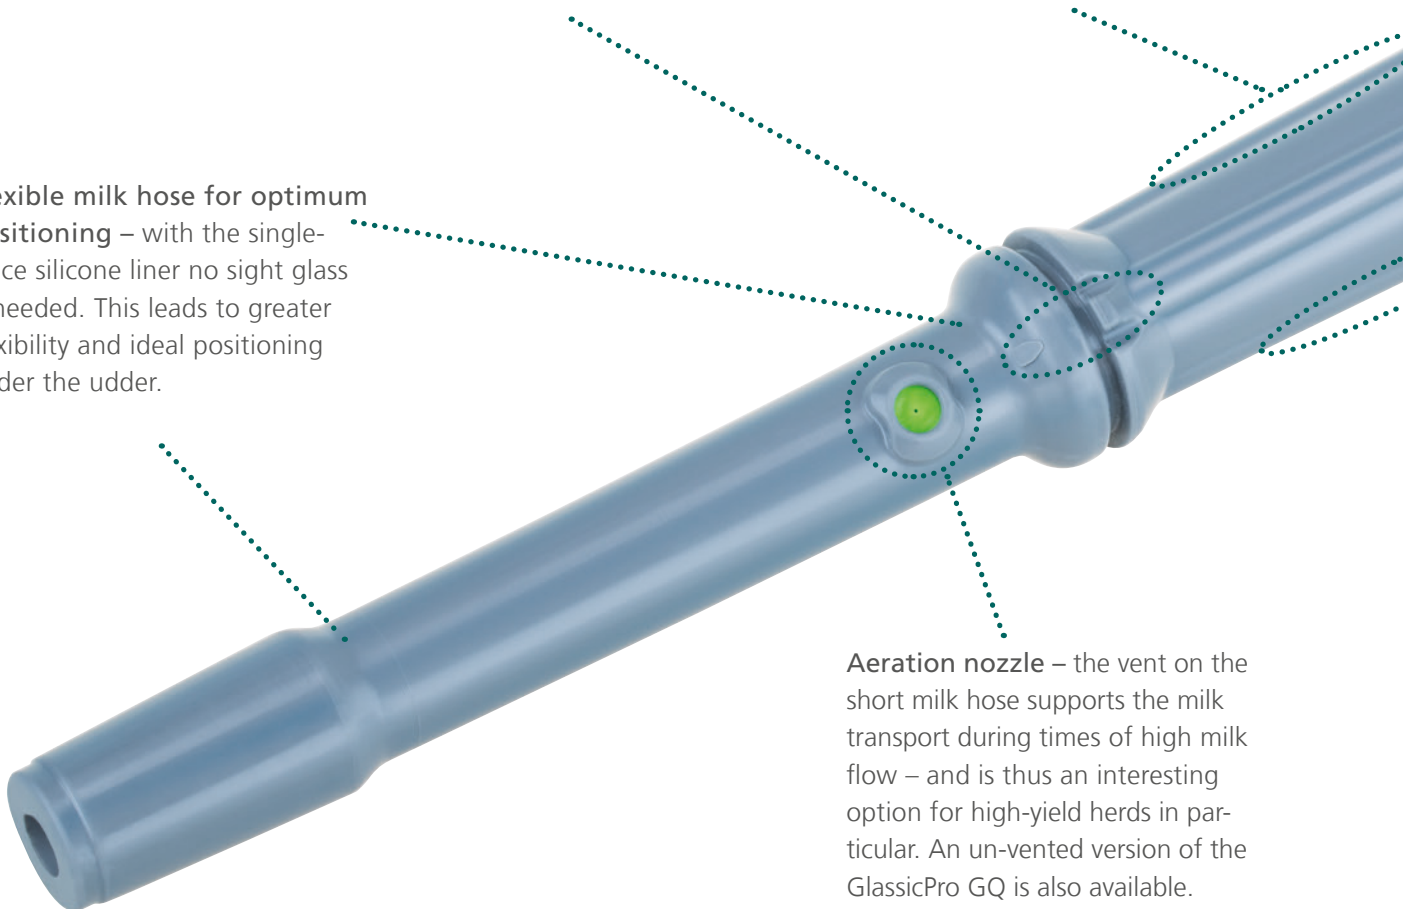

Its particularly good adherence during milking, even with small teats, leads to fast stripping which is gentle on the teats. You thus benefit from healthy cows and efficient milking in one package.

Anti-twist device for a good fit – no twisting of the silicone teat cup liner in the shell - for full functionality.

Optimum adaptability – the conical shaft and the unique folding pattern lead to the proper milking of a broad range of teat sizes and shapes.

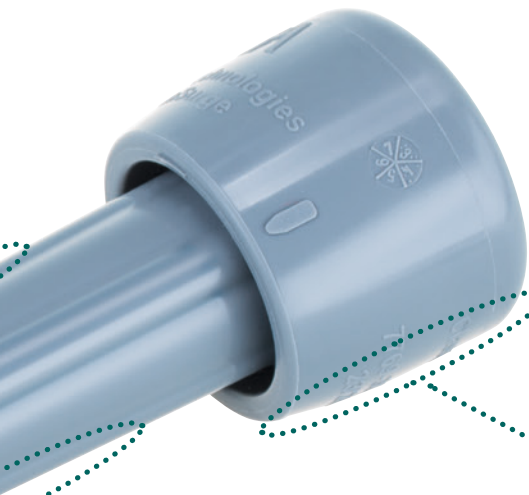

Flexible milk hose for optimum positioning – with the single-piece silicone liner no sight glass is needed. This leads to greater flexibility and ideal positioning under the udder.

Aeration nozzle – the vent on the short milk hose supports the milk transport during times of high milk flow – and is thus an interesting option for high-yield herds in particular. An un-vented version of the ClassicPro GQ is also available.

You have the choice of shells. The black composite shell (recommended for 3x milking per day only) is lighter, the steel shell is proven. In combination with the ClassicPro GQ, they ensure an ergonomically perfect milking experience for both the milker and cows.

A small head for small teats – the small head (height and diameter) ensures perfect massage and perfect milking, particularly for short and closely grouped teats.

A unique design for efficient milking – the shape of the barrel gives a perfect massaging effect throughout the milking process.

Practical experience with the Kelder family:

The 110 dairy cows of Arjan and Gerrit Kelder have now been milked for more than 12 months using the ClassicPro GQ.

„In fact, we were quite happy with our previous liners, but we wanted to try out something new in silicone.

We milkers were surprised how quick and simple the attaching has become for us. We even take a shorter time to milk, with less air leakage and the teat condition is excellent!

We save both time and effort when we replace the liners, because the ClassicPro GQ is a single-piece.

We've noticed that the cows, in particular our heifers, are really calm and relaxed during milking.“

We recommend: „Simply try it out!!!!“

We live our values.

Excellence • Passion • Integrity • Responsibility • GEA-versity

GEA Group is a global engineering company with multi-billion euro sales and operations in more than 50 countries. Founded in 1881, the company is one of the largest providers of innovative equipment and process technology. GEA Group is listed in the STOXX® Europe 600 index.
